# 1 Executive summary

In the industrial and service sector, energy efficiency investments are often not implemented due to a combination of factors and barriers faced by the actors involved. The IMPAWATT project is identifying and addressing these barriers. For this purpose, the project aims at creating a staff training and capacity building platform to enhance corporate policy towards energy efficiency, energy culture and sustainable supply-chain initiatives.

The Impawatt platform is available in 6 European countries also taking into account the multi-lingual situation in the different countries.

## 1.1 Purpose of this document

This document gives access to the English template of the Impawatt portal which will be the example for the national Impawatt portals and the working version for translations and adaptation.

Please visit the Impawatt portal at the following domain: <http://eu.impawatt.com/>

Some features of portal do not work yet, as content and tools are missing because they are due at a later stage of the project or other reasons that are explained in brackets below:

- Link to the national iESA versions (due in June 2019)
- Link to behaviour survey (the consortium decided not to use an external tool but to develop it as portal functionality. This is an add-on feature which will be ready together with the national portals)
- Quiz tool (the consortium decided not to use an external tool but to develop it as portal functionality. This is an add-on feature which will be ready together with the national portals)
- Link to LCA tool which is not yet ready
- Administration backend for content upload (will be ready by mid-April; content will be due end April)
- Weighting of content/measures according to their relevance (up to now, it is only possible to allocate content/measures according to filter categories, without weighting)

The national versions of the platform including the full functionalities will be ready in June 2019.
